

DUO-SAFETY LADDER CORPORATION

Lubrication of Ladders

Clean ladders last longer and properly lubricated ladder sections slide easier and simply work better.

Regardless of the manufacturer, age or material, all ladders will extend and retract easier and smoother if the contacting parts have some lubrication on these surfaces.

Duo-Safety Ladder suggests plain old candle wax or paraffin wax as your best lubrication.

This wax coats and works into the pores of the ladder material and does not easily wash away with frequent water baths. This candle wax is also inexpensive and is readily available anywhere.

We suggest you extend the ladder and simply rub the candle wax over and onto all of the contacting parts.

NOTE: Do not forget to coat the lock parts (lock hook and finger) with wax as this reduces the wear on the rungs as these parts move over the rungs every time the ladder is used.

CLEAN and **WAX** and **INSPECT** every 6 months to keep the ladder accident free. Be sure your ladder is ready to use and it will always be ready to carry you to greater heights.
