

DUO-SAFETY LADDER CORPORATION

Cleaning Ladders

Aluminum

Soap and water works well. Be sure to flush inside the rails and rungs to clear dirt and road salt, etc.

We suggest any liquid car wax and Scotch brand green scrub pad to buff the surface to a smooth finish. Be sure to **clean** and **rewax** the slide areas at the same time.

Be sure to check any heat sensor labels as you clean and wash and try not to wash away the labels. (Replacement labels are readily available from the ladder manufacturer)

Fiberglass

Material: Vinyl ester, high temperature resin system with ultraviolet inhibitors, flame retardant additives and continuous strand rovings pultruded to create a non-conductive ladder rail system.

Cleaning: Soap and water works well. Be sure to flush inside the rails to clear dirt and road salt, etc. We suggest any car wax available as a suitable surface restorer. Use approximately the same care and clean up required as any automotive finish would require.
