

DUO-SAFETY LADDER CORPORATION

Introducing our NEW
Rail Guards
Part# RG-1

**STOP ladder rail damages on
your beam mounted ground ladders**

We have come up with a solution to road damages occurring on beam mounted ladders. Use our NEW Rail Guards to protect your ladder beams from unnecessary wear and damages. They are made of a low density polyethylene plastic - similar to our Pike Pole Butt Ends and are simple to install - they are compression fitted. This plastic guard will raise the ladder beam approx. 1/4" or less from bed area while stored.

Suggested installation is every other rung or every rung (one side only - unless you can store ladders both directions) depending on your average ladder calls made.

Easy to retrofit on any Duo-Safety Ladder (Solid-Side models ONLY) no matter age (one size will fit in all ladder rungs for Duo-Safety Ladders) - why not stop travel damages in it's tracks and help extend the life of your ground ladders!!
